

Course title: Digital Humanities

Prof. J. Savoy

Serie 1. Culinary History

The two most important things to do this week:

- 1) Learning Python (with two sets of slides in the Exercises folder)
- 2) Install the needed packages on your PC (see last two slides)

The practical questions

The function `plot_trend()` is used in Slide #33. Repeat this experiment with ingredients appearing frequently in the 20th century and others mainly in the beginning of the 19th century

Can you compare the recipes appearing in the period 1820–1840 with those appearing in books published between 1900–1920? What are for you the main differences?
